Israel Airport Authority – Environmental Policy

The IAA Commits to manage, develop, operate and maintain all of its facilities in sustainable manner, from a long-term perspective.

The IAA commits to maintaining the balance between the environmental needs and the IAA's economic and operational needs to benefit future generations.

The IAA implements laws and regulations for environmental protection, in order to prevent and constantly reduce the risks and hazards of natural resources, the environment and the community.

Senior Management Team continuously improve the environmental management system performance and act to manage its environmental responsibilities in a systematic manner that contributes to the environmental pillar of sustainability.

The IAA Commits to implement greater input from leadership and stakeholders are involved in Decision Making that influence environmental performance.

The IAA acts to identify measure and understand the environmental impacts of the activity as a basis for making decisions on the following fields:

- ✓ Aircraft noise nuisance
- ✓ Soil, surface runoff water and groundwater pollution
- ✓ Wastewater treatment, effluent usage and water conservation
- ✓ Air quality
- ✓ GHG emissions reduction
- ✓ Climate change adaptation
- ✓ Hazardous materials management
- ✓ Waste management: reduction, recycling and proper disposal
- ✓ Energy efficiency and renewable energy sources
- ✓ Sustainable built environment
- ✓ Sustainable purchasing
